

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.(Currently Amended) An adjustable mirror comprising:  
[[ - ]] a first fluid and a second fluid in contact over a meniscus extending transverse an optical axis, the fluids being substantially immiscible and having different indices of refraction;  
[[ - ]] a reflective surface extending transverse the optical axis; and  
[[ - ]] a meniscus adjuster arranged to controllably alter at least one of the shape and the position of the meniscus so that the meniscus is asymmetric with respect the optical axis.

2.(Currently Amended) ~~An~~ The adjustable mirror as claimed in claim 1, wherein said reflective surface is a substantially planar surface.

3.(Currently Amended) ~~An~~ The adjustable mirror as claimed in claim 1, wherein said meniscus adjuster is arranged to ~~utilise~~

utilize the electrowetting effect to alter the shape of the meniscus.

4.(Currently Amended) ~~An~~ The adjustable mirror as claimed in claim 1, the mirror further comprising an aspherical lens element extending substantially transverse an optical axis.

5.(Currently Amended) An optical device comprising:  
[[ - ]] a first fluid and a second fluid in contact over a meniscus extending transverse an optical axis, the fluids being substantially immiscible and having different indices of refraction;  
a reflective surface extending transverse the optical axis;  
and  
[[ - ]] a meniscus adjuster arranged to controllably alter at least one of the shape and the position of the meniscus so that the meniscus is asymmetric with respect the optical axis.

6.(Currently Amended) ~~An~~ The optical device as claimed in claim 5, wherein the device is a lighting system for providing a directed beam of light, the device further comprising a light source arranged to emit electromagnetic radiation.

7.(Currently Amended) ~~An~~ The optical device as claimed in

claim 5, wherein the optical device comprises a laser cavity, the cavity including a second mirror.

8.(Currently Amended) ~~An~~The optical device as claimed in claim 7, wherein said second mirror is also an adjustable mirror.

9.(Currently Amended) A method of manufacturing an adjustable mirror, the method comprising the ~~steps~~acts of:

[[[]]] providing a first fluid and a second fluid in contact over a meniscus extending substantially transverse an optical axis, the fluids being substantially immiscible and having different indices of refraction;

[[[]]] providing a reflective surface extending transverse the optical axis; and

[[[]]] providing a meniscus adjuster arranged to alter at least one of the shape and the position of the meniscus so that the meniscus is asymmetric with respect the optical axis.

10.(Currently Amended) A method of operating an optical device, the optical device comprising:

[[[]]] a first fluid and a second fluid in contact over a meniscus extending transverse an optical axis, the fluids being substantially immiscible and having different indices of refraction; and

a reflective surface extending transverse the optical axis;

[[ -]] the method comprising controllably altering at least one of the shape and the position of the meniscus so that the ~~mirror provides the desired reflective properties~~ meniscus is asymmetric with respect the optical axis.

11.(New) The adjustable mirror of claim 1, wherein the meniscus adjuster is arranged to alter the at least one of the shape and the position of the meniscus by changing a first wettability of a first side wall of the adjustable mirror by a different amount than a second wettability of a second side wall of the adjustable mirror.

12.(New) The adjustable mirror of claim 1, wherein a first contact angle between the meniscus and a first side wall of the adjustable mirror is different than a second contact angle between the meniscus and a second side wall of the adjustable mirror.

13.(New) The adjustable mirror of claim 1, wherein the optical axis extends through a center of the adjustable mirror.

14.(New) The adjustable mirror of claim 4, wherein the meniscus adjuster is arranged to alter the at least one of the shape and the position of the meniscus to form an effective mirror

having a reflective part and a refractive part.

15.(New) The optical device of claim 5, further comprising a reflector located at one of the optical device.

16.(New) The optical device of claim 5, wherein the meniscus adjuster is arranged to alter the at least one of the shape and the position of the meniscus by changing a first wettability of a first side wall of the adjustable mirror by a different amount than a second wettability of a second side wall of the adjustable mirror.

17.(New) The optical device of claim 5, wherein a first contact angle between the meniscus and a first side wall of the adjustable mirror is different than a second contact angle between the meniscus and a second side wall of the adjustable mirror.

18.(New) The method of claim 9, wherein the meniscus adjuster is arranged to alter the at least one of the shape and the position of the meniscus by changing a first wettability of a first side wall of the adjustable mirror by a different amount than a second wettability of a second side wall of the adjustable mirror.

19.(New) The method of claim 9, wherein a first contact angle between the meniscus and a first side wall of the adjustable mirror

is different than a second contact angle between the meniscus and a second side wall of the adjustable mirror.

20.(New) The method of claim 10, wherein the meniscus adjuster is arranged to alter the at least one of the shape and the position of the meniscus by changing a first wettability of a first side wall of the adjustable mirror by a different amount than a second wettability of a second side wall of the adjustable mirror.
